Kalb Corporation and its **HeatBlocker** Performance Exhaust Insulation will exhibit at **Waste Expo 2009**

Oneida, IL – May 12, 2009. Kalb Corporation will display its flagship **HeatBlocker** Performance Exhaust Insulation at the Waste Expo 2009 held June 9-11 in Las Vegas, NV. **HeatBlocker** has been used in the waste industry to reduce engine fires, protect heat-sensitive engine components, and increase safety for personnel working around the engine. Additionally, **HeatBlocker** can increase your exhaust aftertreatment device's efficiency by maintaining the exhaust gas temperature from the turbo to the ATD.

Kalb Corporation uses only the highest quality materials and fabrication methods in producing **HeatBlocker**. Our designs provide the best fit while accounting for field installation challenges. HB has been used for many years at major OEMs as well as being available aftermarket.

The Kalb Corporation booth can be found in the South Hall 2 at Waste Expo, booth # 2038.

Kalb Corporation, headquartered in west central Illinois, has been providing engineering and prime power engine component services to the industrial engine industry since 1986. Its design and application personnel represent over forty-five years of combined experience in the industry. Further information can be obtained at the Kalb Corporation website: www.kalbcorp.com, or by calling (309) 483-3600.
